

Zabbix

Коннектор узла

Prometheus

Коннектор узла

Платформа: ядро

```
graph LR; Zabbix[Zabbix] --> C1[Коннектор узла]; Prometheus[Prometheus] --> C2[Коннектор узла]; C1 -.-> P[Платформа: ядро]; C2 -.-> P;
```

The diagram illustrates a data integration architecture. On the left, two monitoring systems, Zabbix and Prometheus, are shown in light gray boxes. Zabbix connects via a solid arrow to a green dashed box labeled 'Коннектор узла' (Node Connector). Similarly, Prometheus connects via a solid arrow to another green dashed box labeled 'Коннектор узла'. Both node connectors then send data, indicated by dashed arrows, to a large light blue box on the right labeled 'Платформа: ядро' (Platform: core).
